

# Team Status Report 1 (10/12 - 10/18)

## Section 1 [Goals from last week]

N/A

## Section 2 [This week's progress]

### What we've completed

- Created a thorough project report. This report includes project description, stakeholders, user stories, wireframe diagrams, requirements, UML diagrams
- Created a document of expectations of the project. It included some basic information such as team member information, criteria of the project, the lowest grade satisfied with, time management strategy, team leadership, how to deal with unsatisfactory work from a team member, and project roles.

### What we've worked on

- Scheduling a group meeting over the weekend to get started on planning and developing our front-end, and

### What we've learned

- UML diagrams, Wireframing, Software Planning, Project Management

### What we've had trouble with

- We had a little trouble creating a UML that our professor/TA we're completely satisfied with because we did not include the fields in each class.

### What we've been stuck on

- N/A

## Section 3 [Next week's prospects]

### Short-term plans

- Plan and began development of front-end, most likely using a bootstrap
- Implement GitHub Projects to set micro-goals for our project

### Long-term plans

- Use git to deploy our web app
- Begin implementing some functionality with ruby and our front-end

## Section 4 [next meeting with TA]

Date and time of next meeting with TA: No known meeting time with TA- however in class we will talk with him.
