

Project Milestone 1: Finalize project idea

What motivated your final choice for the project (at least 3 reasons)?

1. This project idea's final product would impact the people and community around me greater than any of our other ideas. (helps CCI students at UNCC)
2. The feasibility of creating a functional final prototype with 3 developers is good.
3. The prospect of being able to take the project further after the course is complete, and turning the prototype into a fully functional app over the summer.

Are there any updates or changes to your project and team since Milestone 0?

One of our team members left. We now have 3 team members so we had to redistribute the project workload and responsibilities. We did not make any updates or changes to the structure of our project.
